METALLURGY & MATERIALS

VACUUM HEAT TREATMENT • TUNGSTEN CARBIDE & TITANIUM

AISI 410 & 420 Martensitic Steels

Selected for scissors, forceps, and cutting instruments requiring optimal tensile strength and superior hardness (Rockwell HRC 50–54). Provides long-lasting razor-sharp cutting edges and corrosion resistance.

AISI 304 & 316L Austenitic Alloys

Utilized for speculums, holloware, trays, and retractors requiring maximum resistance to pitting, chemical attack, and mechanical stress during repeated cleaning cycles.

Titanium Grade 5 (Ti-6Al-4V)

Featured in our ultra-delicate microsurgical and ophthalmic forceps. Non-magnetic, 45% lighter than stainless steel, and zero-corrosion in saline surgical environments.

Tungsten Carbide (TC) Inserts

Gold-handled instruments feature sintered Tungsten Carbide inserts with Rockwell hardness HRC 68–72. Delivers up to 6x longer edge retention than standard surgical steel.

Satin Anti-Glare Surface Finishing

Every instrument is hand-polished to an electropolished satin sheen, significantly reducing reflection under intense operating theater lighting while enhancing grip ergonomics.

ASTM F86 Passivation

Chemical passivation ensures the formation of a continuous chromium-oxide passive barrier, completely shielding the substrate from oxidation and bioburden adhesion.

REPROCESSING & STERILIZATION

ISO 17664 VALIDATED PROTOCOLS FOR MAXIMUM INSTRUMENT LONGEVITY

1. Decontamination & Pre-Cleaning

Rinse instruments immediately after use under cold running water (<25°C) to prevent protein coagulation. Never use abrasive pads or metal wire brushes.

2. Ultrasonic Cleaning

Immerse open hinged instruments in an ultrasonic cleaning bath with neutral pH enzymatic detergent (pH 7.0–8.5) at 40°C for 5–10 minutes. Rinse thoroughly in demineralized water.

3. Automated Washer-Disinfector

Place instruments in wire baskets with ratchet locks open. Thermal disinfection cycle: 90°C–93°C for at least 5 minutes in accordance with EN ISO 15883.

4. Steam Autoclave Cycle

Fractionated pre-vacuum steam sterilization at **134°C (273°F) for 5 minutes** (holding time) or 121°C for 20 minutes. Ensure drying cycle of 20 minutes minimum.

5. Medical Lubrication

Apply medical-grade silicone-free surgical instrument lubricant (milk) to all box locks, joints, and ratchets prior to autoclave sterilization to prevent stiffness and galling.

6. Routine Inspection

Check jaw alignment, ratchet engagement, and cutting edge sharpness prior to repackaging in sterile barrier pouches.
